For Animal Use only.

Terramycin Super
Intra-Uterine Oblets 2 g
Reg. no. G 793 Act 36/1947
Namibia N-SR 0256

Indications
For the treatment of bacterial infections after difficult birth and/or retained placenta in cows, sows and ewes.

Composition
Each oblet contains 2 000 mg Oxytetracycline present as hydrochloride.

Warnings
Do not slaughter animals for human consumption within seven days of last treatment.
Do not use milk from treated animals for human consumption until 72 hours after treatment, provided other factors allow the milk to be fit for human consumption.
Although this remedy has been extensively tested under a large variety of conditions, failure thereof may ensue as a result of a wide range of reasons. If this is suspect, seek veterinary advice and notify the registration holder.

Directions for use
Use only as directed.

Administration:
Before insertion of the oblets, the vulva region of the animal should be thoroughly washed and cleaned as well as the hand and arm used to insert the oblet. Use arm-length disposable, protective gloves.

Dosage:
Cows: 1 oblet once daily (2 may be used in cases of severe infection). Sows and ewes: Half an oblet once daily. If further treatment is required, consult your veterinarian.

NOTE:
The foaming action of the Terramycin Intra-Uterine Oblets depends upon the presence of moisture. In the presence of 20 ml of fluid, 2 litres of Terramycin foam is produced.

The action of this foam is:
(a) To distribute the Terramycin throughout the cavities.
(b) To aid healing by a mechanical cleaning of the uterus wall.

For correct diagnosis, always consult your Veterinarian.
